AtliQ Hardware – Finance Analytics: Problem Statement

Codebasics Data Analytics Bootcamp · Excel Project

1. Business Overview

AtliQ Hardware is a fast-growing company that sells computer hardware: PCs, mice, keyboards, printers, storage and networking products. Its business model is similar to Dell or HP. AtliQ sells to **customers** (stores and online platforms), and those customers sell to **consumers** like you and me.

Customer types (platform)

• **Brick & Mortar:** physical stores such as Croma and Best Buy.

• **E-Commerce:** online marketplaces such as Amazon and Flipkart, plus AtliQ's own e-store.

Sales channels (business model)

Channel	How AtliQ sells	Examples
Retailer	Sells to retail chains and marketplaces, which sell on to consumers	Croma, Best Buy, Amazon, Flipkart
Direct	Sells straight to consumers through its own stores	AtliQ e-Store, AtliQ Exclusive
Distributor	Sells through a middleman where direct sales aren't possible	Markets such as China, South Korea

2. Background

AtliQ's expansion into **Latin America (LATAM)** ended in heavy losses because decisions were based on surveys and intuition, not data. Analytics is now a top agenda item. Excel-based analysis no longer scales with the company, and Dell, a much larger competitor with a big analytics team, is growing fast. Sales figures alone do not show whether AtliQ is actually making money, so the finance team needs profitability views built from net sales and product costs.

3. Problem to Solve

Using Excel, build the following finance reports (all values in USD):

1. **P&L by market (FY2021):** net sales, COGS, gross margin and GM % for every market, with region, sub-zone and fiscal-year filters.

2. **GM % by sub-zone and quarter:** gross margin % for each sub-zone across Q1–Q4 of FY2019, FY2020 and FY2021, to spot where margins are rising or falling.

4. Data Provided

• fact_sales_monthly: monthly quantity and net sales by product and customer

• fact_sales_monthly_with_cost: the same, plus freight cost and manufacturing cost

• dim_customer, dim_product, dim_market: customer, product and market details

• ns_targets_2021: monthly net-sales targets by market
